

Issues with **AP StocksCapFTP**:

1. A restart sometimes corrupts the log file so all files must be redownloaded
2. Crash using "Choose Files to Download" on some machines (Quicksilver, 9.2.2)
3. When "Choose Files to Download" is selected and the folder is empty, the error message is not correctly reported until the window is resized.
4. The installer does not check which version of Carbon Lib is installed. 1.6 is required.
